

A large storage area is provided under the floor of the front walk-thru bathroom in the fifth wheel models. For your convenience, on larger models the trap is held open with gas-filled struts.

Teton incorporates its LP bottle storage into the gooseneck portion of their frame, not taking up any valuable storage space from the rest of the coach.

There's an abundance of both interior and exterior storage in all Teton models. The continental spare tire cover easily opens and stays open with the aid of gas-filled struts. This door provides easy access to the spare tire as well as additional exterior storage. Note the flush-mounted rear rock shield awning, the wraparound taillights and automotive styled bumper.

Besides giving you loads of storage inside the coach, some Teton models even offer total basement storage with access across the entire width of the trailer.

Open up for Storage

Exterior storage is provided on all sides of the Teton units. There is always plenty of room for sporting equipment plus recreational items you might need.

Need a good place to store those long, bulky items like brooms, mops, coolers and maybe even golf clubs? Well, Teton has it. This area can also be pre-wired for a generator if you so desire.
